The Dyneema® Dynalight is heat tempered and pre-stretched:

- As strong as steel cable, but 10 times lighter,
- Perfectly designed: easy on the hands, and comfortable,
- Easy to repair: make quick and easy splices, even in the field,
- Highly resistant to wear, both from constant bending and flexing, and from constant chafing and abrasion,
- Winds well on a winch,
- Very Safe: no hand injuries from burs or snags, and no injuries from whiplash,

- > lightens the work for the users
- > enlarges the work area, due to its lightness and ease of carry
- > improves the working conditions
